From Outbreak to Preparedness:

Zoonotic Spillover in the Pandemic Treaty Era

Wednesday, 25th February 2026
13h30 - 14h30

PROFESSOR SABIHA ESSACK

South African
Research Chair in
Antibiotic Resistance
and One Health,
UKZN

PROFESSOR YUNUS MOOSA

Chief Specialist
& Head of Infectious
Diseases, UKZN

DR NOKUKHANYA MSOMI

Head of Department,
Virology, UKZN
& NHLS Pathologist

DR NQOBILE AMANDA PHAKATHI

Biomedical
Resource Unit
Facility Manager &
Veterinarian, UKZN

Zoonosis is an infectious disease that has jumped from a non-human animal to humans. Zoonotic pathogens may be bacterial, viral or parasitic, or may involve unconventional agents and can spread to humans through direct contact or through food, water or the environment. They represent a major public health problem around the world due to our close relationship with animals in agriculture, as companions and in the natural environment. Zoonoses can also cause disruptions in the production and trade of animal products for food and other uses.

*We are a caring college,
that advocates for social justice and excellence.*

UKZN'S HEARTBEAT

INSPIRING GREATNESS
